Mateen Pervaiz

Alexandria, VA 22309 | (240)-603-8230 | Mateenpervaiz186@gmail.com
Authorized to work for any US employer

Objective

Detail-oriented Electrical Engineer pursuing a Master of Science in Electrical Engineering at George Mason University, with interests in power system protection, transmission and distribution networks, control systems, and renewable energy integration. Eager to leverage analytical, design, and problem-solving skills to enhance power system reliability, operational efficiency, and grid resilience.

Education

Master of Science in Electrical Engineering (*George Mason University)* *Expected: Spring 2028*
Bachelor of Engineering in Electrical Engineering (*Hamdard University)* *Awarded: 2020*

Work Experience

General Manager | Noodles & Company *May 2024 – Present*

- Lead all aspects of restaurant operations, ensuring exceptional customer service, operational efficiency, and consistent business growth in a fast-paced environment.
- Manage team performance, staffing, training, and customer relations to maintain high service standards and an outstanding dining experience.
- Utilize Power BI and data analytics tools to evaluate sales trends, customer behavior, and operational performance, supporting data-driven decision-making. Oversee budgeting, labor cost control, and profitability initiatives while implementing strategies to improve overall restaurant performance.

Substitute Teacher | Fairfax County Public School *Sept 2024 – Present*

- Manage diverse classrooms, maintain student engagement, and adapt quickly to different subjects and grade levels.
- Support student needs, address behavioral concerns, and maintain a respectful and productive learning environment.
- Utilize educational technology and maintain accurate attendance and classroom documentation while following district guidelines.

Design Engineer | MS Town Planning Center *Sept 2021 – Oct 2023*

- Developed electrical systems and product designs based on client requirements, collaborating with cross-functional teams (engineering, R&D, production).
- Created detailed engineering drawings and 3D models using CAD software (AutoCAD, REVIT).
- Performed calculations and analysis (load, stress, thermal, electrical) for design optimization and reliability.

Engineering Course Work

- **Advanced Power System Transmission:** Transmission lines, power flow, voltage regulation, and stability.
- **Power System Modeling & Analysis:** Load flow, fault analysis, symmetrical components, and stability.
- **Electrical Machines:** Modeling, simulation, and steady state/dynamic analysis of AC/DC machines.
- **Advanced Control Systems:** State-space, stability, feedback, optimal, robust, and adaptive control.
- **Advanced Digital Signal Processing:** Fourier transforms, digital filters, and spectral analysis.
- **Power Electronics:** Converters, inverters, PWM, switching, and grid applications.

Project

Brain-Computer Interface (BCI) Control Stroke-less Virtual Keyboard

- Develop a Brain-Computer Interface (BCI) system that allows users to type on a virtual keyboard using brainwave signals, eliminating the need for traditional input devices. Utilize EEG (electroencephalography) sensors to monitor brain activity.

Skills & Tools

Power Systems: Load Flow | Fault Analysis | Power-System Modeling | Transmission & Distribution | Stability
Electrical: System Design | Load Calculations | Electrical Machines | Protection | Grid Operations
Control & Power Electronics: Control Systems | State-Space | Power Converters | Inverters | PWM
Tools: AutoCAD | Revit | Power BI | Excel | Data Analysis
Professional: Technical Analysis | Problem Solving | Project Coordination | Safety & Compliance
